PROFESSIONAL SUMMARY

Detail-oriented and results-driven **Software Development Engineer** (Full Stack) with hands-on experience in building scalable web applications and SaaS products. Proficient in full-stack development, third-party integrations, and performance optimization. Strong problem-solving skills, team collaboration, and a passion for clean, maintainable code. Eager to contribute to innovative projects and enhance user experience through impactful engineering.

WORK EXPERIENCE

Software Development Engineer - I - Codinova Technologies, Noida

July 2025 - Present

Project - Polymath Network (Blockchain-Based Asset Investment Platform)

- Currently contributing to a **microservices-based blockchain platform** enabling issuers to tokenize real-world assets such as **property, land, gold, and businesses**.
- Worked on expanding platform support from **Canada and the United States to multi-country/global support**, enhancing scalability and enabling broader regional asset registration and investment workflows.
- Participated in designing scalable services to support secure digital asset registration and investment operations.

Project - ServdYou (AI-Powered Job Portal)

- Worked on a **microservices-based architecture** for an AI-powered recruitment platform automating hiring workflows.
- Developed and enhanced backend services supporting features such as **AI interviews, human interviews, Email services, and AI-driven candidate sorting**.
- Collaborated on scalable service development and API integrations to improve platform efficiency and reliability.

Project - Zenegy Time (Employee Time & Analytics Platform).

- Successfully migrated the application from **Angular 16 to Angular 17**, upgrading compatibility dependencies and refactoring the codebase to ensure smooth framework adoption and improved maintainability.
- Optimized existing modules and resolved dependency compatibility issues to ensure a stable production migration.
- Built a **project dashboard** for administrators to view detailed analytics of employee activity and performance.

Jr. Software Developer (Full Stack) - Knovator Technologies Pvt Ltd.

July 2024 - July 2025

Project - Artha Job Board (SaaS Product).

- Designed and implemented an automated domain configuration setup, enabling seamless website-to-domain mapping with on-demand SSL certificates, resulting in a 90% reduction in manual support tickets and accelerating client onboarding time by 40%.
- Spearheaded the development of critical features, including XML import and bulk employer onboarding, increasing employer data upload efficiency by 50% and enhancing platform reliability during peak onboarding seasons.
- Built an embed script injection tool, allowing admin users to deploy chatbots, analytics, and third-party scripts.
- Worked closely with the support team to diagnose and fix production issues, ensuring 99% uptime and improved user satisfaction.
